## FRONTEND DEVELOPER

I am a versatile frontend developer with over four years of hands-on experience, specializing in creating intuitive and dynamic web interfaces. Additionally, I possess solid backend knowledge, which allows me to collaborate effectively across the full development stack.

## SKILLS

| | | | | | | |
|---|---|---|---|---|---|---|
| HTML | TypeScript | Redux Toolkit | NodeJS | MongoDB | REST API | Agile/Scrum |
| CSS | React/Next | Scss/Sass | Express | PostgreSQL | WebSockets | Git |
| JavaScript | React/Vite | Angular | Nest | SQL | OOP/FP | AWS |

## EXPERIENCE

**Elif digital**                                                                          nov 2023 - may 2024
**Frontend developer**
Worked together with my coursemates, under the guidance of a professor from our university. We developed a crypto wallet project with integrated AI. Stack was Python + FastAPI and TypeScript + React.
My responsibilities as a frontend developer were to implement real-time monitoring of cryptocurrencies using web sockets.

**INAI**                                                                                      sep 2023 - dec 2023
**Frontend developer**
Completed a practice in institute. Together with other students, we developed the online library website of the Institute. Stack was Django and React. My responsibilities were to design the structure of the frontend part of the site from scratch and integrate backend API.

**Transparency International**                                                        jan 2023 - may 2023
**Frontend developer**
Worked in a professional team as a frontend developer. We developed road improvement web app. Stack was Django and React. My responsibilities were to implement OpenStreetMapAPI to display maps and to integrate backand API.

**Sunrise studio**                                                                        jun 2021 - aug 2021
**Frontend developer**
Contributed to the development of an online shop website, focusing on frontend components.
Utilized React with Redux for frontend development and Django with PostgreSQL for backend.
